

# Master Pump Station 306 Force Main Phase 3 Naples Manor Water Main Replacement Phase 2 Neighborhood Information Meeting

Collier County South Regional Library  
8065 Lely Cultural Parkway, Naples, Florida 34113  
Thursday, January 14, 2016  
5:30 pm to 6:30 pm

## Welcome!

The Master Pump Station 306 Force Main Phase 3 / Naples Manor Water Main Replacement Phase 2 project will add new wastewater infrastructure and replace the existing water infrastructure in portions of the Naples Manor neighborhood.

The project will take place on Sholtz Street, Entrance Road, Floridan Avenue between Johns Street and Sholtz Street, Bryant Avenue and Collins Avenue. Work began January 11, 2015. The three-phase project is expected to finish in the spring 2017.

**Purpose:** Under this project, contractor Douglas N. Higgins, Inc., will install new wastewater infrastructure and replace the existing water system that services this area. The project is necessary to ensure a continued high level of utility services for the community.

**What to expect:** The contractor is beginning the project and you may have already seen equipment and material being delivered, utility locator flags being placed, and the area being surveyed. The infrastructure will be installed and replaced primarily underground. To construct the project crews will remove the road surface and portions of the right-of-way area. Temporary road closures will be necessary and will vary from street to street. Detours will be clearly marked with signs prior to any road closures. The contractor will remove anything in the right-of-way as needed. This will generally include removal of trees, shrubs and structures. If there are objects such as mailboxes or landscaping located within the right-of-way that you want to keep, you are advised to remove or relocate them now. During construction, driveways will be removed from the roadway to the right-of-way line as needed. Upon construction completion, driveways will be restored.
