

Master Pumping Stations 303 and 304 Rehabilitation Project

June 2016

Dear Resident,

The Master Pumping Stations (MPS) 303 and 304 Rehabilitation Project will repair and replace these existing wastewater MPS that serve portions of the Bayshore, Gateway Triangle and East Naples communities.

Construction of the two MPSs will take place simultaneously. MPS 303 is located on the east side of Bayshore Drive and north of Barrett Avenue, and MPS 304 is located on the south side of Thomasson Drive, near Avalon Elementary School and East Naples Community Park. The projects are anticipated to begin this summer and be completed in summer 2017.

Purpose: Under this project, contractor Douglas N. Higgins, Inc. will rehabilitate the two MPSs that serve the area. These pumping stations assist in transporting wastewater from nearby communities to the South County Water Reclamation Facility. The project is necessary to ensure a continued high level of utility service, reliability, and sustainability for each community.

What to expect: The contractor is starting work soon, and you may already be seeing materials arriving at the project sites. Construction activities will take place primarily within the pumping station facilities areas and the County's right of way, but crews will need to move equipment and materials between each site.

Temporary lane closures may occur near the project areas. Flaggers and safety signs will be used to assist motorists through the work zone.

Construction activities are expected to take place Monday through Saturday, from 7 a.m. to 7 p.m., and may result in some noise. Every effort will be made by the contractor to minimize this inconvenience.

For your safety, please stay a safe distance from construction areas and discourage children from approaching construction equipment.
