

Basin 306 Neighborhood Pump Stations Rehabilitation

Dear Resident,

Improvements are coming soon to Wastewater Basin 306 Neighborhood Pump Stations. This rehabilitation project is part of Collier County's Public Utilities Renewal (PUR) Program which includes replacing pump station components, as well as enhancing each station to meet the current standards. Rehabilitation efforts consist of electrical upgrades and replacement of piping, valves and pumps.

The program includes 18 pump stations located within Bayshore and East Naples communities. This Project is scheduled to begin in May 2017 and expected to be complete in early 2018.

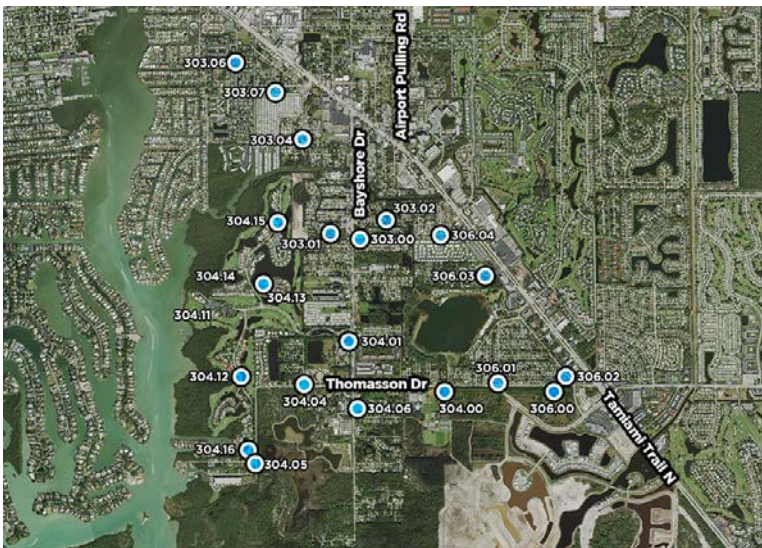

Purpose: The contractor, BLDM, will replace and restore the existing pump stations to better serve these communities. These pump stations assist in transporting wastewater from communities to the South County Water Reclamation Facility. These improvements are necessary to ensure a continued high level of utility service, reliability, and sustainability for your community.

What to expect: The contractor is starting work soon, and you may already be seeing materials arriving at the project sites. Construction activities will take place primarily within the pump station sites and the County's rights of way. Work will be occurring concurrently on a limited number of these pump stations. At times crews will need to move equipment and materials between sites. There will be no interruption in your utility services.

Temporary sidewalk and lane closures may occur near project areas. Flaggers and safety signs will be used to assist pedestrians and motorists through the work zones.

Construction activities are expected to take place Monday through Saturday, from 7 a.m. to 7 p.m., and may result in some low level noise. Efforts will be made by the contractor to minimize noise that will occur due to construction.

For your safety, please keep a safe distance from these construction areas and discourage children from approaching construction equipment.
